

Operations are switching from monitoring and reactive management to **prediction and proactive decision-making**.

Collaboration is breaking down barriers between all the stakeholders and significantly enhancing operations.

Airports will benefit from **integrated airport operations management** that is becoming an industry standard.

The adverse impact of individual airports on capacity and delay of the whole aviation systems will be **monitored**.

Airports and networks are **increasingly sensitive** to disruptions and shall be more resilient to adverse conditions.

Climate change impacts airports and flight operations. Both OPEX and CAPEX will rise in consequence.

We are increasingly relying on **systems**. We shall train the operations community to operate without them as contingency plan.
